

PayGate

Sovereign payment + identity layer for AI agents

x402 + ERC-8004 + on-chain policy + kill switch

BUIDL_QUESTS 2026 · Track 02 — Sovereignty

The problem

AI agents can pay each other with **x402** now. 169+ SDKs. 13,000+ services. \$0 to send a micropayment.

But a compromised or misaligned agent can drain its owner's wallet. The owner has no way to stop it.

The 5 known attacks on x402 (arXiv:2605.11781, May 2026):

#	Attack	Impact
1	Grant-before-settle	Server runs work before payment is confirmed
2	Missing resource-identifier binding	Pay for A, get B
3	Fire-and-forget settlement	Server claims it paid but didn't
4	Missing Cache-Control	402 response gets cached, payment skipped
5	Replay	One payment → many services

And x402 itself has no **identity** (who's paying?), no **policy** (how much can they spend?), no **kill switch** (how do I stop them?), and no **reputation** (are they trustworthy?).

The solution

PayGate wraps any x402 agent with 3 on-chain primitives:

Identity	Policy	Kill switch
ERC-8004 on Base. 17,600+ agents already registered. Portable on-chain handle. No central server.	Per-call cap. Per-epoch cap. Allowlist. Enforced by the contract, not the SDK. A compromised agent cannot bypass.	One transaction pauses the agent. No admin key. No race condition. The owner stays in control.

Drop-in usage:

```
import { wrap } from "@paygate/sdk"; app.post("/api", wrap(cfg, async (input) => myAgent(input), { priceUSDC: 10000n }));
```

3 lines. Your endpoint now returns 402, accepts x402, records on-chain spend, and respects the kill switch.

Live. Tested. Ready.

Code	Tests	Live	Documents

Why PayGate wins

✓	Novelty	First contract-enforced spending policy + kill switch for x402
✓	Standard-composed	Uses ERC-8004 as a consumer; works for the 17,600+ existing agents
✓	Security-first	Mitigates all 5 known x402 attacks; full threat model in SECURITY.md
✓	Open source	MIT licensed, single-binary deploy, drop-in 3-line integration

Asks

- Top 20 selection → travel support to Singapore, mentorship, AWS credits
- Top 10 selection → closed-door pitch to investors at Amber Group's network
- Any placement → cash + credits, exposure to 250K+ developer community on OpenArena + DoraHacks
